

Enterprise Application Development tool for Mobile and Web.

Simply the easiest way to build and deliver intelligent Mobile and Web applications while leveraging your existing IT assets.

What is SmartGuide?

SmartGuide is a leading Web and Mobile Solution Development tool that enables organizations to **easily create, deploy and manage intelligent and personalized user-centric applications**. It provides organizations with the agility to quickly deliver efficient Web and Mobile services to all their stakeholders while unleashing the full value of corporate IT assets.

FASTER DEVELOPMENT WITH SMARTGUIDE

- ✓ Empower and engage business users to design and configure business applications
- ✓ Build, test and maintain applications easily with a full array of drag-and-drop tools
- ✓ Reach consensus quickly through rapid prototyping
- ✓ Work on the business, presentation and data layers in parallel from day one
- ✓ Re-use components across multiple applications

KEY BENEFITS

- ✓ Easily build online services from any of your existing IT assets
- ✓ Cut development and maintenance time by up to 90%
- ✓ Optimize and enhance user experience
- ✓ Increase user adoption and compliance rates
- ✓ Improve quality and cost-effectiveness of service delivery
- ✓ Seamlessly integrate into any secure environment

What is the SmartGuide experience?

Guide users every step of the way as they interact with your organization online, whether they are submitting applications, reviewing status, making payments or searching for information that's accurate and relevant to their needs. The resulting user experience is as personalized, interactive and efficient as a face-to-face interaction.

What does SmartGuide deliver?

1-Mobile and Web application development: Build and deploy highly effective Web and Mobile applications. These applications, called Smartlets, smartly guide the user through complex processes.

2-Develop Faster. Easier: Shorten the application life cycle management of Web and Mobile applications by as much as 90% while empowering line of business personnel to build applications without custom programming and with minimal training.

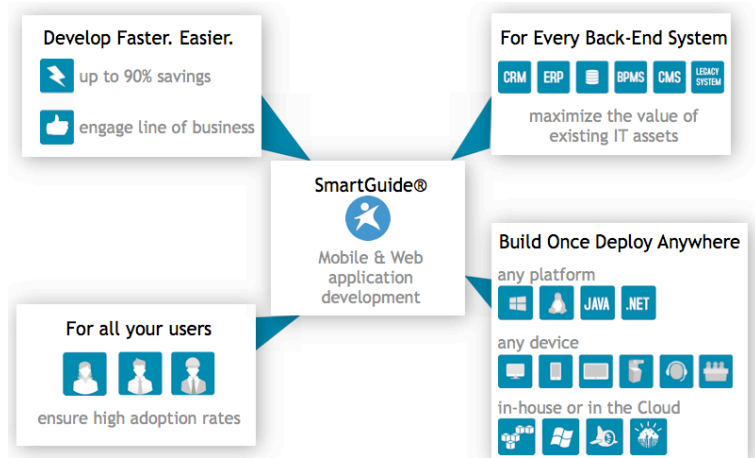

3-For every back-end system: Extend the value and usage of your current applications and systems without disrupting your current IT environment. Leverage all of your existing IT assets to quickly deliver user-centric applications that people will want to use.

4-For all your users: Simplify and improve interactions with all your stakeholders (customers, employees, partners, suppliers, etc.), resulting in greater cost-effectiveness, customer satisfaction and employee productivity.

5-Build Once, Deploy Anywhere™: Deliver the end-user interaction layer regardless of the platforms and devices (ex: laptop, mobile, etc.) involved in the process. Deploy on any environment, whether in-house or in the Cloud.

"SmartGuide is the only solution that allows us to industrialize our online service delivery operation and no other solution provides such a rapid return on investment."

SYSTEM REQUIREMENTS

Platforms

- » Windows 2003 / 2008 / 2012 / 2016 Server
- » Windows 10 / 8 / 7 / XP
- » All Linux (Redhat, SUSE, CENTOS, etc.)
- » Sun Solaris
- » HP-UX
- » IBM AIX

Application servers

- » IBM WebSphere Application Server
- » IBM Liberty Profile
- » Oracle WebLogic
- » Oracle Application Server
- » JBoss CE and EE, WildFly
- » JOnAS
- » Tomcat
- » Glassfish
- » Any other J2EE-compliant app server
- » Microsoft Internet Information Services (IIS)

Portal servers

- » IBM WebSphere Portal
- » Oracle WebLogic Portal
- » Oracle WebCenter
- » Liferay CE and EE
- » SAP Netweaver
- » Pluto
- » Any JSR168- and JSR286 compliant portal server
- » Microsoft Office SharePoint Server 2007/2010/2013
- » Support for Remote Portlet (WSRP)

Database Management systems

- » Oracle
- » Microsoft SQL Server
- » IBM DB2
- » MySQL
- » Any DBMS that offers a JDBC or ODBC connector

Cloud ready

- » Container and Microservices Platforms (Docker, Rocket)
- » Deployment patterns for IBM PureApps
- » IBM Softlayer
- » Microsoft Azure
- » Google Apps Engine
- » Amazon Cloud

A few examples of how you can use SmartGuide

SmartGuide allows organizations to create any custom web, portal and cloud application, tailored specifically to their business processes, and integrated with one or multiple backend systems.

Solution examples
✓ Single-window view
✓ Self-service portal
✓ Enabling applications for the Cloud
✓ Intelligent e-services
✓ Guided searches & knowledge bases
✓ Life events
✓ Surveys and more...

Applicable industries
✓ Public sector
✓ Smart Cities
✓ Financial services
✓ Healthcare
✓ Independent Software Vendors
✓ Telecommunications
✓ and any regulated industry or profession

MAIN FEATURES

WYSIWYG element positioning – Achieve complex layouts by rearranging elements practically anywhere on a page.

Device simulator – See what your application will look like across a wide range of devices, large and small (desktop, tablets and smartphones).

CSS class picker – Allow non-technical users to easily create impressive effects on the application's appearance.

Permissions management – Integrated security for asset protection in multi-user access scenarios.

Visual page flow editor – Automated visual representation of an application's page flow and branching rules.

Visual rules editor – Manipulate field values, define field visibility and page branching rules without writing a single line of code.

Zero-code web services integration – Integrate SOAP and REST web services using simple web interfaces.

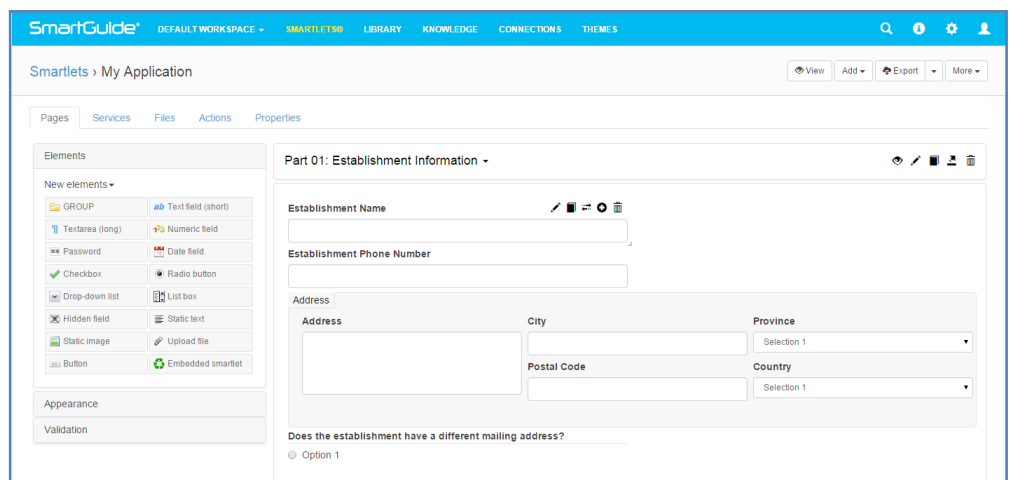

Powerful API for custom functions – Seamlessly integrate to any system or add custom functionalities.

Predefined native functions – Reduce the amount of code that needs to be written to build a new application.

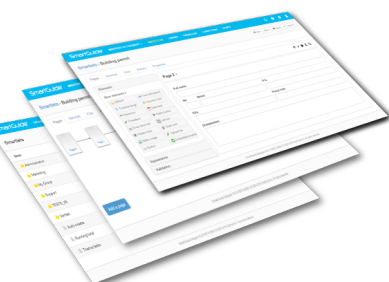

Auto-documentation – Automatically generate documentation of your applications as they are being built.

Advanced built-in validations – Perform syntactic and semantic validations in 1 click!

Accessibility – Compliant with WCAG 2.0 AA and section 508.

The screenshot displays the SmartGuide web interface. At the top, there's a navigation bar with 'Smartlets > My Application'. Below this, a 'Pages' tab is active, showing a 'Services' section. On the left, there's a 'New elements' panel with various form components like Text field, Numeric field, Date field, etc. The main area shows a form titled 'Part 01: Establishment Information' with fields for 'Establishment Name', 'Establishment Phone Number', and 'Address'. The 'Address' field is split into 'Address', 'City', 'Province', 'Postal Code', and 'Country' sub-fields. There are also dropdown menus for 'Province' and 'Country'. At the bottom, there's a question 'Does the establishment have a different mailing address?' with a radio button for 'Option 1'.
